Oracle11g 监听程序

当前无法识别连接描述符中请求的服务

一 打开 cmd 输入 sqlplus system/***** (注****表示密码) 能连接 Oracle 数据库；但输入 sqlplus system/******@orcl11g 点回车则显示：监听程序当前无法识别连接描述中请求的服务；

二：使用 SQL/PLUS 工具连接也是显示一样的结果：监听程序当前无法识别连接描述中请求的服务；

三：解决方法：

i): 打开这个文件

C:\MyOracle\Oracle\product\11.2.0\dbhome_1)\NETWORK\admin\listener.ora;

   SID_LIST_LISTENER =

     (SID_LIST =

       (SID_DESC =

         (SID_NAME = CLRExtProc)

         (ORACLE_HOME =

C:\MyOracle\Oracle\product\11.2.0\dbhome_1)

```
      (PROGRAM = extproc)

      (ENVS =

"EXTPROC_DLLS=ONLY:C:\MyOracle\Oracle\product\11.2.0\dbhome

_1\bin\oraclr11.dll")

    )

   (SID_DESC =

      (GLOBAL_NAME = orcl)

      (ORACLE_HOME =

C:\MyOracle\Oracle\product\11.2.0\dbhome_1)

      (SID_NAME = orcl)

    )

  )
```

最后显示如下：

```
 1  # listener.ora Network Configuration File: D:\oracle_11g\product\11.2.0\dbhome_1\NETWORK\ADM
 2  # Generated by Oracle configuration tools.
 3
 4  SID_LIST_LISTENER =
 5    (SID_LIST =
 6      (SID_DESC =
 7        (SID_NAME = CLRExtProc)
 8        (ORACLE_HOME = D:\oracle_11g\product\11.2.0\dbhome_1)
 9        (PROGRAM = extproc)
10        (ENVS = "EXTPROC_DLLS=ONLY:D:\oracle_11g\product\11.2.0\dbhome_1\bin\oraclr11.dll")
11      )
12      (SID_DESC =
13        (GLOBAL_DBNAME = orcl11g)
14        (ORACLE_HOME = D:\oracle_11g\product\11.2.0\dbhome_1)
15        (SID_NAME = orcl11g)
16      )
17    )
18
19
20  LISTENER =
21    (DESCRIPTION_LIST =
22      (DESCRIPTION =
23        (ADDRESS = (PROTOCOL = IPC)(KEY = EXTPROC1521))
24      )
25      (DESCRIPTION =
26        (ADDRESS = (PROTOCOL = TCP)(HOST = 128.32.115.116)(PORT = 1521))
27      )
28    )
29
30  ADR_BASE_LISTENER = D:\oracle_11g
31
```

iii)自己按照 IP 或者数据库实例名修改后保存，再重启数据库监听服务；运行

sqlplus system/******@orcl11g 连接成功;
